

EE142 - Intro to Machine Learning and Data Mining

This folder is organized by course material type so the project root stays clean.

Structure

- `Logistics/`: syllabus and course logistics documents
- `Lectures/`: lecture slide PDFs in lecture order
- `Resources/`: textbook chapters and reference reading
- `Homework/`: problem sets, notebooks, datasets, and supporting assets

Conventions

- Put new lecture PDFs in `Lectures/`.
- Put reading chapters and reference PDFs in `Resources/`.
- Put syllabus, policies, and schedule material in `Logistics/`.
- Keep homework notebooks, drafts, datasets, and generated figures inside the relevant `Homework/Problem Set X/` folder.
- Avoid storing course files directly in the project root unless they describe the folder itself.
